# ACREAGE AND PRODUCTION OF CROPS, 1954

One of the larger volumes of crops was produced in 1954, despite acreage restrictions for several important crops and severe drought in a large part of the country. Most products were of high quality.

All-crop production in 1954 totaled over 100 percent of the high 1947-49 average. This is the fifth largest on record, almost as large as the 101 percent in 1949, although well below the record 106 percent in 1948. In 1952 and 1953 the indexes were 103 percent.

Harvested acreages of the principal crops totaled 337 million acres, 4.2 million acres less than in 1953. Except for 1951, which it barely tops, this is the smallest total since 1941. Yields per acre, however, ranged rather uniformly high for most crops, so that the composite yield index is 107.7 percent of the new 1947-49 base, virtually equalling the record 107.8 set in 1948.

In attaining the large 1954 all-crop volume, only a few crops set new records--soybeans, rice, sugar beets, and oranges. But outturns of oats, barley, sorghum grain, sorghum silage, alfalfa seed, cranberries, and commercial vegetables for fresh market as a group, were near-record. Larger-than-average crops were harvested for rye, flaxseed, cotton lint and cottonseed, all hay, dry beans, tobacco, sugarcane for sugar and seed, olives, lemons, avocados, almonds, walnuts and commercial vegetables for processing as a group. All others were below average in volume, with peanuts and sweetpotatoes a little more than half average, buckwheat, sorgo sirup, and cowpeas less than half average, velvetbeans about one-fifth, and durum wheat less than one-sixth average.

## Weather

Fall-sown grains were seeded under mostly unfavorable, droughty conditions in the fall of 1953, with much seeding delayed until rains in late October and November improved field conditions. Growers finally completed seeding about all their intended acreage of winter wheat, but under the acreage allotment program it was the smallest acreage seeded since 1943. Continuing drought in the Southwest caused heavy abandonment of wheat, but in other areas all grains wintered well. Spring grains and flax were seeded under favorable conditions in most all but the northernmost sections where a severe cold wave and snow delayed work. More than usual difficulty was met in obtaining stands of cotton and much was late. Corn was mostly planted by June 1, with some delay in a wet northeastern area. Soybeans were virtually all planted by mid-June. For sorghums, planting of the near-record acreage continued over a more extended period than usual, with a large late acreage.

During the spring growing season, crops made good progress except in the dry western portion of the central and southern Great Plains. Even in the dry area some sections favored by light timely rains obtained fair yields of wheat. In most other areas yields were excellent. Spring grains developed well and only a little oats and barley was damaged as harvest approached. However, spring wheat and especially durum, became heavily infested with rust which seriously reduced yields in the Minnesota-Dakotas area. With a general shortage of summer rainfall, drought was a constant threat to crops, but in only a limited area were outturns seriously affected. The dry weather did not affect cotton materially and was favorable for harvesting most grains. Corn was seriously affected in drought areas by searing temperatures at pollination time, resulting in barren stalks usable only for silage or forage. Soybeans weathered the period and recovered to make fair to good yields in most areas. Most other crops struggled along and with a more favorable fall season for growth and maturity developed good outturns, particularly cotton and sorghums. Of the later-growing crops, peanuts were most adversely affected. Tobacco cured out heavier than earlier expected.

Summer drought affected much of the southern half of the country east of the Rocky Mountains. In the Southwest, it was a continuation of the condition that had caused heavy abandonment and low yields of winter wheat. For the third successive summer, Missouri and Arkansas became the center of a drought area which spread in all directions, but mostly eastward, during the summer. Most of the area had harvested excellent grain crops and some early hay. But corn was seared at pollinating season, pastures and water supplies dried up, and it became evident that feed would be short for livestock. The Southeast was more seriously affected than in 1953. Relief came to much of the area in the fall. Rains in Texas, Oklahoma, and up through the Great Plains permitted seeding of wheat, but did not continue in sufficient volume to maintain normal development.

## Near-Record Yield per Acre

Record yields per acre were realized in 1954 for only cotton lint, barley, all tobacco (particularly burley), and alfalfa seed. Yields of winter wheat, rice, potatoes, sugar beets, and hops were second-highest of record, while others nearing top yields include oats, all hay, and sugarcane for sugar and seed. Much better than average yields developed for rye, dry beans, cranberries, and alsike clover seed, while those for corn, buckwheat, popcorn, sorghum grain, dry peas, soybeans, peanuts, maple products, red-clover and sweetclover seeds also were above average. On the other hand, yields of spring wheat, flaxseed, sorghum forage and silage, cowpeas, sweetpotatoes, sorgo sirup, sugarcane sirup, broomcorn, lespedeza and timothy seeds ranged from near average to sharply below and durum wheat yielded less than a third of average. With most crops yielding above average to record high, the all-crop yield index is computed at nearly 107.7 percent of the 1947-49 base. This is virtually the same as the record set in 1948.

## Acreage Below Average

About 354 million acres of the 59 principal crops were planted or grown in 1954. This is nearly 6 million acres less than in 1953 and 5 million below average. It reflects reductions of over 22 million acres in wheat and cotton mostly because of acreage allotments, but these were offset in part by sharp increases in oats, barley, sorghums, flax, rye, and rice.

A relatively small total of 337 million acres of crops were harvested in 1954. Among major crops, there were reductions below 1953 of 0.7 million acres of corn, about 8.2 million acres of winter wheat, 5.8 million acres of spring wheat, 5.2 million acres of cotton, and 1.2 million acres of hay. These were partly offset by increases in harvested acreages of oats, 2.9 million acres; barley, 4.4 million; rye, 0.3 million; flax, 1.2 million; sorghum for grain 4.6 million and for silage and forage another 0.8 million; and soybeans for beans, 2.4 million acres.

By regions, total harvested acreages in 1954 were smaller than in 1953 in all but the South Central

area. In North Atlantic States, a reduction of over 1 percent lowered the total to 15 million acres, smallest of record. The North Central area total was virtually as large as in 1953, the 196.7 million acres making up 58 percent of the national total. The 23.4 million acres harvested in South Atlantic States was 5 percent less than in 1953 and the smallest in 26 years of comparable record, reflecting effects of the summer drought. In the South Central area, the large sorghum acreage held the total at 63.6 million acres, slightly above the relatively low 1953 level. In the West, a drop of 7 percent brought the total down to 38.2 million acres. California alone harvested a record total acreage of crops.

Losses of acreage--the difference between planted and harvested totals--were about 17.1 million acres. This is 1.5 million acres less than in 1953, but with the added exception of 26 million acres in 1951, the largest acreage loss total since 1939. Most of the 1954 acreage loss was due to 7.4 million acres of winter wheat not harvested for grain, and diversion of 5.1 million acres of oats and 1.5 million of barley, heavier than usual loss of 2 million acres of corn, and abandonment of over 2 million acres of sorghums. Not all the diverted acreages of grains are included in the losses, however, as about 3 million acres were harvested for grain hay.

## Grains

Over 154 million tons of the 8 grains were harvested in 1954. This tonnage was exceeded in 6 of the last 8 years, but in several of these, as in 1953, by only a small margin. The 32.8 million tons of food grains has been exceeded in all recent years except 1951, but is more than in any year before 1944. The all wheat outturn of 970 million bushels is nearly 200 million less than in 1953. The rice crop of 58.9 million bags of rough rice continues the record-breaking of each successive recent year, with 6.2 million bags more than in 1953. The 23.7 million bushels of rye is a little above the average of the last 10 years. But the 2.7 million bushels of buckwheat is the smallest outturn in 66 years of record.

Feed grain tonnage was relatively large in 1954. The 121.6 million tons was exceeded slightly in 1946 and 1950, otherwise only by the record of 135.4 million tons in 1948. The 2,965 million bushel corn crop is slightly below average, one of 3 in the last 9 years to fall below 3 billion bushels, but it is mostly of good quality and feeding value outside the drought area. The 1.5 billion bushels of oats, only slightly less than the record 1945 crop, are mostly of good quality and heavy test weight. The barley crop of 370 million bushels is also second-largest in history. Sorghums were planted over a longer period than usual and on a near-record acreage, often in hopes of obtaining needed forage in drought areas. But favorable growing periods and an extended fall for maturing resulted in much more grain being produced than expected earlier. The outcome was 204 million bushels of sorghum grain, also a near-record quantity. This total feed tonnage, together with heavy carryover stocks, provides a record total supply and a near-record supply per animal unit for the 1954-55 feeding season.

## Other Crops

While the 104.4 million tons of mostly good quality hay was 1.1 million tons less than in 1953, it is 2.4 million tons more than average. A record proportion and tonnage of alfalfa and alfalfa mixtures and more grain hay were harvested, but relatively small amounts of clover-timothy and lespedeza hay and less wild hay and other kinds than in 1953.

Oilseeds are in record supply in 1954-55, with a total of over 17.5 million tons. This is about 6 percent more than in 1953 and a fourth more than average. The record 343 million bushel soybean crop makes up nearly 60 percent of the total. The expected 5.6 million tons of cottonseed is a tenth more than average, but makes up less than a third of the total. With only 1,044 million pounds of peanuts the tonnage is a little more than half average. But the fourth-largest flaxseed crop of 41.5 million bushels helps swell the total.

Tobacco acreage barely exceeded that of 1953 and was below average because of restrictions on some types, but with a record yield of 1,337 pounds per acre production of all types totaled 2,200 million pounds, a total exceeded only 3 times previously. As in some previous dry seasons, the leaf weighed out heavier than expected.

Nearly 2.6 million tons of sugar, raw value, may be produced from beets and cane this year, compared with over 2.4 million tons last season. With an expanded acreage of sugar beets and a near-record yield, a record 14 million tons were produced. The outturn of 6,940,000 tons of sugarcane for sugar and seed was 9 percent less than the record 1953 crop. Production of sugarcane sirup was less than a third of average and of sorgo sirup about 40 percent of average; each was less than in 1953. With a favorable season and more trees tapped, more maple products were produced, especially sirup, than in 1953.

Potatoes were grown on an acreage 8 percent smaller than in 1953, but with a near-record yield. The outturn of 355 million bushels was 7 percent less than last year and an eighth below average. Production of early potatoes was sharply curtailed with an acreage a fifth less than in 1953. The reduction in the late crop was less percentagewise, but larger in bushels. Fall rains and the extended growing season increased yields over earlier prospects. The 30 million bushels of sweetpotatoes is the third smallest crop since 1881. Yields were record high in New Jersey, but limited by drought in southern areas.

Dry beans were grown on an acreage nearly a fifth larger than in 1953, but abandonment was heavy. Yields were adversely affected by wet weather in the Northeast area and by drought in the Southwest; in addition, clean-out was heavy. Production of 18.9 million bags (thresher run) or 17 million bags (clean basis) was above average. For dry peas, acreage, yield, and production were all slightly larger than in 1953, but the 3.5 million bags is less than two-thirds of average. Production of 1,359,000 bushels of cowpeas for dry peas was the smallest in 31 years of record. Velvetbeans continued the downtrend to a production of 68,000 tons, less than a fifth of average.

The supply (1954 production plus carryover) of the six important hay-crop seeds--alfalfa, red, alsike and sweetclover, lespedeza, and timothy--for planting during the 1954-55 season is 7 percent smaller than a year earlier and 11 percent below average. Smaller carryovers into 1954 of each of these seeds, except alsike clover, more than offset the slightly larger total production. Harvesting began a little late, but went forward mostly under favorable conditions. Quality of the 1954 crop of these seeds is fairly good to good.

## Harvested Acreage of Principal Crops, United States, 1939–54

| Year | Corn, all | Oats | Barley | Sorghum grain | 4 feed grains | Wheat | | | Rye | Buckwheat | Rice | 4 food grains | Flaxseed |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | | | | | | Winter | Spring | All | | | | | |
| | 1,000 acres | 1,000 acres | 1,000 acres | 1,000 acres | 1,000 acres | 1,000 acres | 1,000 acres | 1,000 acres | 1,000 acres | 1,000 acres | 1,000 acres | 1,000 acres | 1,000 acres |
| 1939 | 88,279 | 33,460 | 12,739 | 4,760 | 139,238 | 37,681 | 14,988 | 52,669 | 3,822 | 370 | 1,045 | 57,906 | 2,171 |
| 1940 | 86,429 | 35,431 | 13,525 | 6,374 | 141,759 | 36,095 | 17,178 | 53,273 | 3,204 | 388 | 1,069 | 57,934 | 3,182 |
| 1941 | 85,357 | 38,161 | 14,276 | 6,015 | 143,809 | 39,778 | 16,157 | 55,935 | 3,573 | 337 | 1,214 | 61,059 | 3,266 |

[1] Acreage partially duplicated.
[2] Asparagus, lima beans, snap beans, beets, cabbage (sauerkraut), sweet corn, cucumbers, green peas, pimientos, spinach, and tomatoes.
[3] Principal vegetables grown for fresh market in major producing States included in regular monthly reports: Artichokes, asparagus, lima beans, snap beans, beets broccoli, brussels sprouts (since 1949), cabbage, cantaloups, carrots, cauliflower, celery, sweet corn (all major States included only since 1949), cucumbers, eggplant, escarole, garlic, Honey Ball melons, Honey Dew melons, kale, lettuce, onions, green peas, green peppers, shallots, spinach, tomatoes, and watermelons. Excludes farm gardens. Acreage for harvest, including mature acreage abandoned or only partially harvested because of low prices or other economic factors.
[4] Totals are for crops shown in preceding columns, omitting alfalfa seed, red clover seed, alsike clover seed, and lespedeza seed. These are included in the count of crops, but the acreage is not included because mostly duplicated in the hay acreage; the acreage of peanut hay, largely duplicated in peanuts picked and threshed, has been deducted. Other crops not included are hops, spelt, hemp, velvetbeans, various legumes and other crops harvested by livestock, minor crops, and fruits and nuts. The acreages shown include some crops harvested in succession from the same land.
[5] Preceding column plus estimates of acreage planted, and not harvested, as shown in separate table of acreage losses.

## Bearing Acreage of Fruits, United States, 1939–54

| Year | 4 citrus fruits[1] | 8 major deciduous fruits[2] | 6 minor fruits[3] | 3 planted nuts[4] | 21 fruits and planted nuts |
|---|---|---|---|---|---|

[1] Oranges, grapefruit, and lemons. [2] Commercial apples, peaches, pears, grapes, plums, prunes, and apricots. [3] Percentage yields of the 18 field crops shown combined in proportion to their relative value during the period. [4] A composite of yields per acre of 3 citrus fruits and 7 deciduous fruits. [5] As computed from yields of field crops per acre harvested and yields of fruit per acre of bearing age, as shown, combined in proportion to their relative values during the 1947–49 period.

## Total Harvested Acreage of Principal Crops, by States, 1953 and 1954, With Comparisons

| State | Total harvested acreage of 59 crops (excluding duplications)[1]: Average 1943–52 | 1953 (revised Dec. 1954) | Dec. 1954 estimate |
|---|---|---|---|
| | *1,000 acres* | *1,000 acres* | *1,000 acres* |

[1] Clean seed. Includes alfalfa, red clover, alsike clover, sweetclover, lespedeza, and timothy seed. [2] Produced from bloom of year shown. [3] Marketed largely during summer and early fall months of year following bloom. [4] Marketed largely during fall, winter and spring months, beginning in year shown. Includes tangerines. [5] Includes plums, prunes (fresh basis), apricots, figs, olives, and avocados. [6] Asparagus, lima beans, snap beans, beets, cabbage (sauerkraut), sweet corn, cucumbers, green peas, pimientos, spinach, and tomatoes. [7] Principal vegetables grown for fresh market in major producing States included in regular monthly reports. Artichokes, asparagus, lima beans, snap beans, beets, broccoli, brussels sprouts (since 1949), cabbage, cantaloups, carrots, cauliflower, celery, sweet corn (all major States included only since 1949), cucumbers, eggplant, escarole, garlic, Honey Ball melons, Honey Dew melons, kale, lettuce, onions, green peas, green peppers, shallots, spinach, tomatoes, and watermelons. Excludes farm gardens. Includes some quantities not marketed.

## Corn Utilization, 1953 and 1954

[1] All corn, oats, barley, and sorghum grain. [2] All hay, sorghum forage, and sorghum silage. [3] All wheat, rye, buckwheat, and rice. [4] Irish potatoes, sweetpotatoes, dry edible beans, dry field peas, vegetables for processing, vegetables for fresh market, and farm gardens. [5] Fruits, berries, and tree nuts. [6] Sugar beets, sugarcane for sugar and seed, sugarcane sirup, sorgo sirup, maple sugar and maple sirup. [7] Cotton lint and cottonseed. [8] Soybeans, peanuts picked and threshed, flaxseed, tung nuts, and peanuts hogged. [9] Includes production of hay, pasture, and cover crop seeds, and miscellaneous crops (cowpeas, hops, broomcorn, popcorn, peppermint and spearmint), not included in separate crop groups shown.

## Acreage Losses: Estimated Acreages of Crops Planted and Not Harvested, United States, 1939–54[1]

| Year | Corn | Winter wheat | All spring wheat | Oats | Barley | Sorghums | Flaxseed | Cotton | Beans, dry edible | Other crops[2] | Total[3] |
|---|---|---|---|---|---|---|---|---|---|---|---|
| | 1,000 acres | 1,000 acres | 1,000 acres | 1,000 acres | 1,000 acres | 1,000 acres | 1,000 acres | 1,000 acres | 1,000 acres | 1,000 acres | 1,000 acres |

[1] The acreages shown for winter wheat represent the acres sown in the preceding fall and not harvested, thus including considerable land subsequently planted to other crops. The totals do not show total crop losses chiefly because of the large acreage of hay land which produced nothing except pasturage in some dry seasons.
[2] Rice, buckwheat, potatoes, sweetpotatoes, sugar beets, and dry field peas.
[3] Excludes grains cut for hay.

# Statistics of Important Crops, by States, 1954

## Corn, All[1]

| State | Acreage | | | Yield per harvested acre | | | | | Production | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|

[1] This table covers corn for all purposes, including hogged and siloed corn, and that cut and fed without removing the ears, as well as that husked and snapped for grain. The yield for grain, with an allowance for varying yields of corn for other purposes, is applied to the total acreage to obtain an equivalent production expressed in terms of grain.

## Production (Clean Basis) of Leading Seed Crops, United States, 1939–54

| Year | Alfalfa | Red clover | Alsike clover | Sweet-clover | Lespedeza | Timothy | 6 seed crops | Redtop | Orchard-grass | Kentucky blue-grass[1] | Sudan-grass | Tall fescue (alta and ky. 31) | White clover | Ladino clover | Crimson clover | Hairy vetch |

[1] On acres in cultivation July 1 less 1944-53 average abandonment.
[2] Production ginned and to be ginned. A 500-lb. bale contains about 480 net pounds of lint.
[3] Sums of acreage and production for "other States" rounded to thousands for inclusion in United States totals. Estimates for these States, except Kansas where cotton production is insignificant, are shown separately in May, July, and December.
[4] Included in State and United States totals.
[5] Based on 1949-53 average ratio of lint to cottonseed.
[6] Short-time average.

[1] A small percentage for July is included in August. Loan cotton redeemed before Aug. 1 is credited to the sales within the month in which redemptions were made.

[2] Total through April for 1953 crop. Excludes unredeemed loan cotton and cotton still in producers' hands on May 1 and on Aug. 1.

[3] Preliminary.

A mimeographed report on percentage of marketings, by States, may be had from the Agricultural Marketing Service, Washington 25, D. C.

## Velvetbeans[1]

| State | Total acreage | | | Yield per acre | | | Production | | |
|---|---|---|---|---|---|---|---|---|---|
| | Average 1943-52 | 1953 (revised Dec. 1954) | Dec. 1954 estimate | Average 1943-52 | 1953 (revised Dec. 1954) | Dec. 1954 estimate | Average 1943-52 | 1953 (revised Dec. 1954) | Dec. 1954 estimate |
| | 1,000 acres | 1,000 acres | 1,000 acres | Pounds | Pounds | Pounds | 1,000 tons | 1,000 tons | 1,000 tons |
| South Carolina | 43 | 15 | 25 | 1,068 | 970 | 560 | 24 | 7 | 7 |
| Georgia | 534 | 201 | 269 | 848 | 900 | 220 | 226 | 90 | 30 |

[1] Season begins with the bloom of the year shown and ends with the completion of harvest the following year. In California, picking usually extends from about Oct. 1 to Dec. 31 of the following year. In other States the season begins about Oct. 1 and ends in early summer, except for Florida limes, harvest of which usually starts about April 1. Estimates of production include fruit consumed on farms, sold locally, and used for manufacturing purposes, as well as that shipped. Fruit ripened on the trees but destroyed by freezing or storms prior to picking is not included. For economic abandonment, see page 37.

[2] Includes small quantities of tangerines.

[3] Short-time average.

[4] Net content of box varies. In Calif. and Arizona the approximate average for oranges is 77 lb. and grapefruit 85 lb. in the Desert Valleys; 68 lb. for California grapefruit in other areas; in Florida and other States, oranges, including tangerines, 90 lb. and grapefruit 80 lb.; California lemons, 79 lb.; Florida limes, 80 lb.

[5] In California and Arizona, Navels and Miscellaneous.

[6] First report of production from 1954 bloom for California Valencia oranges and grapefruit in "Other" areas is issued in December; first report for California lemons is issued in November.

[1] In some years, in addition to the quantities shown, some tonnage was not harvested on account of economic conditions.
[2] The drying ratio in Washington and Oregon ranges from 3 to 4 pounds of fresh fruit to 1 pound dried; in California, the drying ratio is approximately 2½ pounds fresh to 1 pound dried.
[3] Excludes quantities used on farms where grown.
[4] Includes some dried, frozen, and other.
[5] Dry basis.

[1] Corn for grain; either shelled or ear corn. [2] Old crop only. [3] Less than 500 bushels. [4] Includes stocks at interior mills, elevators, and warehouses; commercial stocks reported by Grain Division, AMS, at terminals; and those owned by Commodity Credit Corporation which are in transit to ports, in bins and other storages under C.C.C. control. [5] Unallocated--to avoid disclosing individual operations.

[1] State averages calculated by dividing the reported total daily milk production on the 1st of each month by the number of milk cows in milk or dry on farms reporting. Figures for New England States and New Jersey are based on combined returns from crop and special dairy reporters. Figures for other States, regions and United States are based on returns from crop reporters only. Regional figures include less important dairy States not shown separately. The United States average is based on about 20,000 herds. To reduce to quarts, divide by 2.15.

## Milk Production on Farms in the United States, by Months, 1954, With Comparisons

| Month | Average 1943-52 | 1953 | 1954[1] |
|---|---|---|---|
| | *Million pounds* | *Million pounds* | *Million pounds* |
| January | 8,268 | 8,822 | 9,202 |
| February | 8,130 | 8,584 | 9,001 |
| March | 9,599 | 10,183 | 10,683 |
| April | 10,353 | 10,905 | 11,280 |
| May | 12,286 | 12,631 | 12,999 |
| June | 12,327 | 12,438 | 12,600 |
| July | 11,577 | 11,597 | 11,558 |
| August | 10,529 | 10,610 | 10,474 |
| September | 9,156 | 9,289 | 9,369 |
| October | 8,558 | 8,862 | 9,021 |
| November | 7,665 | 8,348 | 8,474 |
| December | 7,931 | 8,880 | 8,841 |
| Total | 116,379 | 121,149 | 123,502 |

[1] Out-of-State dairy cattle sold on the Brighton, Mass. cattle market and reshipped immediately to other States have not been included in Massachusetts inshipments or outshipments.

[2] Data on outshipments are for the fiscal year period ending June 30.

[3] Data for 1954 are estimates of dairy cattle only, based on a 9-month breakdown between dairy and beef animals. For earlier years inshipment and outshipment data include some beef breeding cattle which in 1954 accounted for 7 percent of the total.

## Livestock: Number on Farms, by Classes and by States, January 1, 1955

| State and division | Cattle | | | | | | | | | Hogs | | | |

# ANNUAL LIVESTOCK INVENTORY JANUARY 1, 1955

Livestock and poultry on farms and ranches showed a net increase of 3 percent during 1954. The total for January 1, 1955, was 7 percent below the peak of January 1, 1944. The aggregate increase resulted from a substantial increase in hog numbers and small increases in cattle, chickens, and turkeys. Sheep and lambs, horses and mules were down from a year earlier.

Combining the species on the basis of their economic importance reveals that livestock numbers increased 3 percent and poultry increased 1 percent. Meat animals (cattle, hogs, and sheep) were up almost 3 percent, while workstock was down 9 percent. Milk cattle (milk cows, heifers, and calves) showed a decrease of 1 percent.

Feed supplies were generally ample for the country as a whole. However, drought areas in the Southern and Central Plains States and Southern States have short feed supplies, particularly hay. Western range feed conditions in the fall of 1954 were the poorest since 1934. Despite the poor condition of pasture and range feed in many parts of the country, cattle and sheep numbers were maintained surprisingly well. Inventories were reduced substantially in some hard-hit areas of the Mountain and Plains States. Other sections show large increases in receipts of feeder livestock, especially cattle.

Production of feed grains in 1954 was slightly larger than in 1953 and 4 percent larger than average. The available supply of feed grains and concentrates on January 1, 1955, was the highest of record, and the supply was also near a record per animal unit. The 1954 hay crop was slightly smaller than a year earlier. While hay supplies were generally ample for the country as a whole, there were very marked differences by areas.

Prices for most livestock and livestock products were favorable in relation to feed prices early in 1954 which contributed to increases in production for hogs, commercial broilers, and eggs. Prices were less favorable later in the year for hogs, commercial broilers, turkeys, and eggs as increased supplies were marketed.

Along with the increase in aggregate inventories during the year, production rates were at or near record.

[1] Excludes farm slaughter. [2] Excludes lard and rendered pork fat. [3] Chicken and turkey meat--ready to cook basis, excludes slaughter on farms for home use and nonfarm production. Estimates of monthly poultry meat production based on available indications of marketings developed from information on inventories, numbers raised, intentions to raise and market poultry as well as data on chick placements and current monthly marketings. [4] Includes rendered pork fat.

## Livestock Slaughter: Number, Average Live Weight, and Total Live Weight, United States, by Months 1954, Annual 1953 and 1954[1]

### Cattle

| Month and year | Slaughter | | | Average live weight | Total live weight |
|---|---|---|---|---|---|
| | Federally inspected | Other Whole-sale and retail | Total | | |
| | *1,000 head* | *1,000 head* | *1,000 head* | *Pounds* | *Mil.pounds* |
| 1954: | | | | | |
| January | 1,541.0 | 543.6 | 2,084.6 | 950 | 1,980 |
| February | 1,302.5 | 472.9 | 1,775.4 | 947 | 1,682 |
| March | 1,511.0 | 552.6 | 2,063.6 | 943 | 1,946 |
| April | 1,416.8 | 502.4 | 1,919.2 | 936 | 1,796 |
| May | 1,439.1 | 524.6 | 1,963.7 | 929 | 1,823 |
| June | 1,570.4 | 546.1 | 2,116.5 | 916 | 1,938 |
| July | 1,622.0 | 555.2 | 2,177.2 | 906 | 1,972 |
| August | 1,635.2 | 570.8 | 2,206.0 | 901 | 1,987 |
| September | 1,637.6 | 633.7 | 2,271.3 | 900 | 2,043 |
| October | 1,616.2 | 589.6 | 2,205.8 | 914 | 2,015 |
| November | 1,601.8 | 550.3 | 2,152.1 | 925 | 1,991 |
| December | 1,582.7 | 524.2 | 2,106.9 | 946 | 1,994 |
| January-December 1954 | 18,476.3 | 6,566.0 | 25,042.3 | 925 | 23,167 |
| January-December 1953 | 17,629.5 | 5,976.0 | 23,605.5 | 937 | 22,118 |

### Calves

| Month and year | Slaughter | | | Average live weight | Total live weight |
|---|---|---|---|---|---|
| | Federally inspected | Other Whole-sale and retail | Total | | |
| | *1,000 head* | *1,000 head* | *1,000 head* | *Pounds* | *Mil.pounds* |
| 1954: | | | | | |
| January | 546.1 | 398.9 | 945.0 | 215 | 203 |
| February | 517.7 | 379.1 | 896.8 | 198 | 177 |
| March | 660.5 | 458.9 | 1,119.4 | 194 | 217 |
| April | 598.4 | 393.1 | 991.5 | 201 | 199 |
| May | 561.1 | 386.8 | 947.9 | 220 | 208 |
| June | 622.0 | 436.9 | 1,058.9 | 235 | 249 |
| July | 639.9 | 426.4 | 1,066.3 | 241 | 257 |

[1] Includes sheep shorn at commercial feeding yards.
[2] For Texas and California the weight per fleece is the amount of wool shorn per sheep and lambs during the year.
[3] Average for marketing season April-March, including an allowance for loan wool. 1954 preliminary.

[1] Ratio of the Index of Prices Received by Farmers to the Index of Prices Paid, Interest, Taxes, and Farm Wage Rates. This Parity Ratio will not necessarily be identical to a weighted average percent of parity for all farms products largely because; pursuant to law, parity prices for some products are on the modernized formula, others are on the old formula, and some are on a transitional basis.

## Index Numbers of Prices Received by Farmers for All Farm Products, United States, by Months, 1910–54[1]

(1910-14 = 100)

| Year | Jan. 15 | Feb. 15 | Mar. 15 | Apr. 15 | May 15 | June 15 | July 15 | Aug. 15 | Sept. 15 | Oct. 15 | Nov. 15 | Dec. 15 | Average |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| 1910 | 107 | 105 | 107 | 106 | 104 | 104 | 102 | 100 | 103 | 102 | 101 | 101 | 104 |

[1] Ratio of the Index of Prices Received by Farmers to the Index of Prices Paid, Interest, Taxes, and Farm Wage Rates. This Parity Ratio will not necessarily be identical to a weighted average percent of parity for all farm products largely because, pursuant to law, parity prices for some products are on the modernized formula, others are on the old formula, and some are on a transitional basis.

# Average Prices Received by Farmers, United States, 1944-54

[1] Season average refers to the crop of the designated year and was computed by weighting State season average prices by estimated production.
[2] Includes an allowance for unredeemed loan and purchase agreement deliveries valued at the average loan rate by States.
[3] Does not include payment of 30 cents per bushel for wheat delivered under the Government purchase program.
[4] Preliminary.

[1] Season average refers to the crop of the designated year and was computed by weighting State season prices by estimated production except for potatoes and sweetpotatoes which were weighted by estimated sales.
[2] Includes an allowance for unredeemed loan and purchase agreement deliveries valued at the average rate by States.
[3] Preliminary.

[1] Preliminary.
[2] Does not include an allotment for production payments from January 1944 through June 1946.
[3] Annual average for milk retail is simple average of midmonth prices.
[4] Estimated average price for the month for all milk sold at wholesale.

# Average Prices Received by Farmers for Farm Products, by States and by Months, 1954
